PATENT NO.:

6.979.539

DATED:

July 04, 2006

INVENTOR(S):

George Norbert Cox III; Casey Christopher Case; Stephen P.

Eisenberg; Eric Edward Jarvis; Sharon Kaye Spratt

It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Office initiated Certificate of Correction Memo

The following claims are corrected as follows (formatted by strikethrough of deleted text and underlining added text)

1. A method of inhibiting expression of an endogenous cellular pine gene in a cell, the method comprising the step of:

administering to the cell a nucleic acid molecule comprising a polynucleotide sequence which encodes a first engineered zinc finger protein, wherein

- (i) said polynucleotide sequence is operably linked to a promoter,
- (ii) the nucleic acid molecule expresses the zinc finger protein is less in the cell;
- (iii) the zinc finger protein contacts a first target site in the endogenous cellular gene; and
- (iv) the K.sub.d of the zinc finger protein is less than about 25 nM;

thereby inhibiting expression of the endogenous cellular gene.

PATENT NO.:

6,979,539

DATED:

July 04, 2006

INVENTOR(S):

George Norbert Cox III; Casey Christopher Case; Stephen P.

Eisenberg; Eric Edward Jarvis; Sharon Kaye Spratt

It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

- 2. The method of claim 1 wherein the step of administering further comprises administering a second zinc finger protein-encoding nucleic acid operably linked to a promoter that expresses a second zinc finger protein in the cell, and wherein the stop step of contacting father further comprises contacting a second target site in the endogenous cellular gene with the second zinc finger protein.
- 3. The method claim 2, wherein the flat wad first and second target sites are adjacent.
- 4. The method of of claim 3, wherein the first and second zinc finger proteins are covalently linked, miming forming a fusion protein.

PATENT NO.:

6,979,539

DATED:

July 04, 2006

INVENTOR(S):

George Norbert Cox III; Casey Christopher Case; Stephen P.

Eisenberg, Eric Edward Jarvis, Sharon Kaye Spratt

It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

- 16. The method of claim 1, wherein the step of administering the nucleic acid molecule to the cell comprises administering the nucleic acid molecule in a lipid:nucleic acid complex or as naked nucleic acid.
- 18. The method of claim 1 17, wherein the expression vector is a viral expression vector.
- 19. The method of claim 18, wherein the expression vector is a retroviral expression vector, an aderoviral adenoviral expression vector, or an AAV expression vector.
- 20. The method of claim 18 wherein the promoter to which the zinc finger-encoding nucleic acid is operably linked is an inductable inducible promoter.

PATENT NO.:

6,979,539

DATED:

July 04, 2006

INVENTOR(S):

George Norbert Cox III; Casey Christopher Case; Stephen P.

Eisenberg; Eric Edward Jarvis; Sharon Kaye Spratt

It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

- 29. A method of inhibiting expression of an endogenous cellular pine gene in a cell, the method comprising the step of: administering to the cell a nucleic acid molecule comprising a polynucleotide sequence which encodes a first engineered zinc finger protein, wherein
  - (i) said polynucleotide sequence is operably linked to a promoter;
  - (ii) the nucleic acid molecule expresses the zinc finger protein in the cell;
  - (iii) the fusion zinc finger protein comprises six fingers and a regulatory domain;
  - (iv) the fusion zinc finger protein contacts a target site in the endogenous cellular gene and;
  - (v) the  $K_d$  of the zinc finger protein is less than about 25 nM;

thereby inhibiting expression of the endogenous cellular gene.

31. The method of claim 30, wherein the step of administering father further comprises administering a second zinc finger protein-encoding nucleic add operably linked to a promoter that expresses a second zinc finger protein in the cell and wherein the step of contacting further

PATENT NO.:

6,979,539

DATED:

July 04, 2006

INVENTOR(S):

George Norbert Cox III; Casey Christopher Case; Stephen P.

Eisenberg; Eric Edward Jarvis; Sharon Kaye Spratt

It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

comprises contacting a second target site ix in the endogenous cellular gene with the second zinc finger protein.

- 45. The method of claim 30, wherein the step of administering the nucleic acid molecule to the cell comprises administering the nucleic acid molecule in a lipid:nucleic acid complex or as marked nucleic acid.
- 46. The method of claim 30, wherein the nucleic acid molecule is an expression vector comprising a zinc finger protein encoding nucleic acid operably linked toe <u>a</u> promoter.

PATENT NO.:

6,979,539

DATED:

July 04, 2006

INVENTOR(S):

George Norbert Cox III; Casey Christopher Case; Stephen P.

Eisenberg; Eric Edward Jarvis; Sharon Kaye Spratt

It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

- 49. The method of claim 47, wherein the promoter to which the zinc finger protein encoding by a nucleic acid is operably linked to an inducible promoter.
- 50. The method of claim 47, wherein the promoter to which the zinc finger protein encoding by a nucleic acid is operably linked is a weak promoter.
- 54. The method of claim 31 30, wherein the target site is adjacent to an RNA polymerase pause site, wherein the RNA polymerase pause site is downstream of a transcription initiation site of the endogenous cellular gene.
